

# Goulds 3185

Heavy-duty Process Pumps

# Goulds 3185

Above: A Model 3185 installed in a recycle mill.

Below: Model 3185 on difficult high temperature service. Spring-mounted baseplate provided to compensate for thermal expansion.

Below: Cooling water pump for primary turbine at a power plant in the Middle East.

- ◆ Capacities to 6000 m<sup>3</sup>/h (26,000 GPM)
- ◆ Heads to 125 m (410 feet)
- ◆ Temperatures to 230° C (446°F)
- ◆ Pressures to 16 bar (232 PSIG)

## World-wide Experience on Process Pumping Services

When Goulds developed the 3185, we utilized 140 years of pump design experience to ensure it would have unmatched mechanical reliability. Today, installations around the world attest to its remarkable performance.

The 3185 is the heavy duty process pump designed to handle all of your tough process pumping applications.

## World-class Pump Line

Model 3185 is built to Metric standards.

- ◆ ISO or JIS 16 bar flange drilling
- ◆ mm-dimensioned O.D. of mechanical seal sleeve
- ◆ mm-dimensioned bearing locknut
- ◆ mm-dimensioned shaft and keyway at coupling
- ◆ International design 3185 pumps comply to ISO 5199 with eight sizes conforming to ISO 2858 dimensions. Metric fasteners and fittings used throughout.

# Model 3185

## LUBRICATION FLEXIBILITY

The preferred lubrication of oil is standard. No special parts required to convert to grease.

## STANDARD LABYRINTH OIL SEALS

Prevent premature bearing failure caused by lubricant contamination and loss of lubricant.

## CONTINUOUS HIGH-PERFORMANCE

Original high efficiency maintained by simple external impeller adjustment resulting in long term energy savings.

## HEAVY-DUTY SHAFT

Designed for minimum deflection at maximum load. Dry shaft achieved by sealing from pumpage by O-rings at sleeve and impeller nut.

## RIGID FEET

Large casing and bearing frame feet maintain driver alignment with high pipe loads; absorb system vibration.

## SEALING FLEXIBILITY

Choice of mechanical seal (illustrated), packed box or dynamic seal.

## TAPERBORE™ PLUS SEAL CHAMBER

Wide range of sealing arrangements available to meet service conditions. Patented seal chambers improve lubrication and heat removal (cooling) of seal faces for extended seal life and pump uptime.

## CASING

Top centerline discharge for air handling and self-venting. Special volute design reduces radial loads. Back pull-out design. Foot-mounted.

## RENEWABLE SUCTION SIDEPLATE

With open impeller design minimizes maintenance costs. Positively sealed with O-ring and gasket.

## OPEN IMPELLER

Full back shroud and thick impeller vanes for handling slurries and stringy fibers. Large balance holes and back pump-out vanes minimize stuffing box pressure and axial thrust. Optional enclosed impeller available. Shearpeller™ design available for difficult recycle services.

# See The Difference

## Engineered Impeller and Sideplate

Acknowledged best design for industrial process services

*It offers:*

1. Ease of adjustment to maintain optimum performance
2. Clamped sideplate for maximum reliability and zero leakage
3. Minimum hydraulic loads for maximum mechanical reliability

# 1 Renewable High-performance

## Easy and reliable

With any impeller adjustment there will be two metal components that will have to move relative to each other. Goulds puts this precision fit in the sealed and lubricated environment of the power end.

Easy and accessible adjustments. The Goulds adjustment bolts are very accessible and can be adjusted with one tool.

VS.

Less reliable pumps utilizing adjustable sideplates are difficult to adjust, are not precise in clearances and the adjustment must take place in the corroded casing interior leading to leakage. Improper adjustments lead to broken studs and catastrophic failure.

VS.

The adjustable sideplate method requires two tools. Additionally, the pump suction flange limits the accessibility to the adjusting screws.

# 2 Clamped Sideplate

For maximum reliability and zero leakage

**CLAMPED**

Our sideplate is clamped securely and sealed positively to ensure that it does not lead to breakage or leakage.

**VS.**

**FLOATING**

The "floating" sideplate design must scrape over a casing surface that will be corroded and fouled. This commonly leads to a leakage path through the sideplate studs.

# 3 Minimum Hydraulic Loads

Maximum mechanical reliability

Goulds open impeller design was engineered to assure minimum radial and axial thrust loads to maximize seal and bearing life.

1. Full back shroud — maximizes mechanical integrity
2. Balance holes — low axial thrust
3. Engineered back vanes — extended seal and bearing life

**ENGINEERED FOR LONG LIFE**

Back vane height/angle and shroud design are engineered to minimize hydraulic loads throughout the life of the pump. Bearing life is guaranteed.

As the open impeller is adjusted and performance renewed, back pump-out vanes control axial thrust. Bearing and seal life are maintained — unaffected by adjustment.

# Power Ends Designed for Maximum Reliability

Power End Reliability is vital when thinking about pump *mean time between failure* (MTBF). To ensure maximum bearing life, the 3185 follows three key bearing design factors:

1. Bearing Design Life
2. Bearing Temperature
3. Bearing Environment

## 1 Bearing design life

Bearing manufacturers state that skidding, cage stresses and oil temperatures can greatly reduce the bearing life of oversized bearings. The "right" size bearing is vital to overall bearing life.

**Bearing Load Measured on Test**

**Bigger is NOT always better!**

Bearings are often oversized because pump designers often estimate bearing loads. Goulds measured their loads on test and chose bearing designs that would enable bearing life of 100,000 hours.

## 2 Bearing temperature

Keeping the pump loads minimized and selecting the "right" bearing will keep bearing temperature under control.

**Bearing Temperature vs. Size**

Typical bearing operating temperatures of competitor's process pumps are between 60-70°C. Goulds Model 3185 bearing temperatures average only 50°C/120°F!

# 3 Bearing environment Labyrinth oil seals are standard

Contamination being the second leading cause of bearing failure requires special attention. Common lip seals were not considered due to their 2,000 hour design life. After wearing out, there will be an open passage way for contamination. For this reason, our 3185 is supplied with Inpro VBXXD labyrinth oil seals as standard. The Inpro VBXXD is the industry's leading bearing isolator and provides the best operating environment for the bearing.

**RIGID FRAME FOOT**  
Heavy duty foot reduces effects of pipeloads/thermal expansion on bearing life. Bearings continue to run cool.

**STANDARD LABYRINTH OIL SEALS**

Prevent contamination of lubricant for extended bearing life.

**LARGE OIL SIGHT GLASS**

The standard oil sight glass assures oil level is properly set and maintained. Condition of oil is also easily monitored.

## Power end reliability is both designed-in and guaranteed

- Bearing Design Life..... ✓ (>100,000 hours)
- Bearing Temperature..... ✓ (50°C/120°F) average)
- Bearing Environment..... ✓ (Superior Oil Seal design)
- Guarantee..... ✓ (Reliability Guarantee)

## Our guarantee

*Goulds Pumps backs the 3185 power ends with an unconditional guarantee against defects in workmanship and material for 3 years from date of manufacture.*

## Impeller Designs to Optimize Performance

The right design for the service results in optimum efficiency and up-time, especially when handling difficult media such as recycle fibers with contaminants.

# 1

### Open Impeller

Design suitable for most services. Allows for resistance to wear and corrosion. Provides for easily renewable clearances. Designed for optimum efficiency.

# 2

### Enclosed Impeller

Available for services where efficiency is a consideration and enclosed design is suitable for service conditions. Efficiency can be renewed with axial adjustment and/or wear ring replacement. Also beneficial for high temperature services as it allows the suction sideplate to be eliminated.

## Goulds clog-free pumping solution patented design (# 6,609,890)

Pumping applications in recycle mills present unique challenges with the presence of plastic and tape along with other contaminants that can readily clog the pump impeller.

# 3

### The Goulds Shearpeller™ solves this problem:

- ◆ Generous front clearance with vortex-type design to prevent binding and plugging.
- ◆ Patented tapered inlet sleeve prevents contaminants from plugging inlet area. The sleeve is loose to rotate independently from impeller. The slower rotation prevents contaminants from collecting at the impeller eye and prevents erosion of hub.
- ◆ Proven in tough services such as repulper dump service in OCC recycle mill. In one service, pump went from a daily outage to clear impeller to uninterrupted, continuous service.
- ◆ Component changes only involve the impeller and sleeve. Uses same casing, sideplate, shaft and impeller nut as 3185.

## Optimize Seal Configuration for Service and Environment

# 1

### For services with solids and vapor Goulds-patented **TaperBore™ PLUS**

**How It Works:** The unique flow path created by the patented Vane Particle Ejector directs solids away from the mechanical seal, not at the seal as with other tapered bore designs. And, the amount of solids entering the bore is minimized. Air and vapors are also efficiently removed.

1. Solids/liquid mixture flows toward mechanical seal/seal chamber.
2. Turbulent zone. Some solids continue to flow toward shaft. Other solids are forced back out by centrifugal force (generated by back pump-out vanes).
3. Clear liquid continues to move toward mechanical seal faces. Solids, air, vapors flow away from seal.
4. Low pressure zone created by Vane Particle Ejector. Solids, air, vapor liquid mixture exit seal chamber bore.
5. Flow in TaperBore™ PLUS seal chamber assures efficient heat removal (cooling) and lubrication. Seal face heat is dissipated. Seal faces are continuously flushed with clean liquid.

## 2 Zero flush water (Mechanical seals)

**The 3185 has a revolutionary seal chamber design guaranteed to operate on 6% paper stock without flush water!**

PATENTED! No. 5,336,048

Aside from the high cost of flushing mechanical seals and the possible dilution of the product, contaminants in the flush water can also cause seal failures. Disruption of flush water caused by plugging, freezing or inadvertently closing a valve can also cause failures. The answer to those problems is solved with the Goulds patented TaperBore™ PLUS.

## 3 Dynamic seal

For elimination of mechanical seal problems; reduced maintenance

Patented 5,344,163

The 3185 is easily field converted to Dynamic Seal with retrofit parts—backplate, stuffing box cover, repeller, sleeve.

Goulds *Dynamic Seal* option is ideally suited to handle the tough applications where conventional mechanical seals or packing require outside flush and/or constant, costly attention. This option allows pumping slurries without an external flush. A repeller between the stuffing box cover and impeller pumps liquid from the stuffing box while the pump is running. A diaphragm seal prevents leakage when the pump is not operating.

### Benefits of Goulds Dynamic Seal:

- ◆ External seal water not required.
- ◆ Elimination of pumpage contamination or product dilution.
- ◆ Eliminates problems and costs associated with piping from a remote source.

## Ease of Maintenance

- ◆ High strength casing lugs to secure cover to casing.
- ◆ Lugs swing away without removal during disassembly. Prevents lost or misplaced lugs and casing bolts.
- ◆ Lug can be used as jacking bolt to assist in pump disassembly.
- ◆ Large opening on each side of adapter for easy access to seal and gland.

### Monitoring sites

- ◆ Monitoring sites for vibration and temperature are provided as standard for accurate and repeatable readings.
- ◆ Bull's eye sight gauge for accurately monitoring oil level. Also provides visual inspection of oil quality.

- ◆ Capacities to 3,000 m<sup>3</sup>/h (13,000 GPM)
- ◆ Heads to 125 m (410 feet)
- ◆ Temperatures to 300°C (508°F)
- ◆ Pressures to 25 bar (360 PSIG)

## World-class pump line

### Model 3181

- ◆ ANSI Class 300 flange drilling
- ◆ Inch-dimensioned O.D. of mechanical seal sleeve
- ◆ Inch-dimensioned bearing locknut
- ◆ Inch-dimensioned coupling extension

### Model 3186

- ◆ ISO or JIS 40 bar flange drilling
- ◆ mm-dimensioned O.D. of mechanical seal sleeve
- ◆ mm-dimensioned bearing locknut
- ◆ mm-dimensioned coupling extension

## Goulds 3181/86

Designed to handle high temperature and high pressure services of the pulp & paper industries

## Design Features

- ◆ **Hydraulic Coverage** – Line designed for full 50/60 Hz performance.
- ◆ **Back Pull-out Construction** – Spacer type coupling allows one-craft maintenance.
- ◆ **Centerline Supported** – High temperature stability.
- ◆ **Labyrinth Seals** – Eliminate loss of lubricant, prevent lubricant contamination for maximum bearing life.
- ◆ **Maximum Interchangeability** – Power end and impellers completely interchangeable with Goulds Models 3180.
- ◆ **International Design** – Metric fasteners and fittings used throughout.

## Services

Digester recirculation

Make-up liquor

White liquor

Black liquor

High pressure/high temperature pulp mill services

Hot oil

## Model 3181/86

For high pressure/temperature services

- ◆ Centerline mounted
- ◆ Fully-confined spiral wound-casing basket
- ◆ Through bolted seal chamber

## World-class Paper Stock and Medium Consistency Products

Goulds offers a variety of products in various configurations to meet your medium consistency pumping and mixing needs

### Standpipe Arrangement with ClO<sub>2</sub> Mixing

Stock from washers and mixers feed special Goulds standpipes that are reverse tapered to prevent stock bridging. Systems include controls for vacuum, dilution, level and flow, ClO<sub>2</sub> Optimix™ mixer and chemical injection pipe are included.

### Tower Bottom Arrangement

Stock from bleach / storage towers falls into Goulds feed chute connected to the tower with expansion joint and isolation valve. Depending on tower level and consistency a vacuum pump may not be required.

### Booster Arrangement

Goulds booster pump will increase pressure, but does not require standpipe or degassing system.

# Pick Your Perfect Process Pump

No one in the industry offers the broad range of process pumps that Goulds does!

Whether it's for pumping severe corrosives, abrasive slurries, fibrous/stringy solids, high temperature liquids, hazardous fluids, low flow or high capacity services — Goulds has a perfect, reliable solution. The Goulds selection of pump solutions includes horizontal and vertical configurations in a range of alloy and non-metallic constructions, sealed and sealless.

The Pulp and Paper Industry has the widest range of applications of any industry. Goulds wide range of products ensures that we have the right pump for virtually every application.

**PROSMART**

ProSmart™ encompasses the latest technology\* in condition monitoring to transform your Predictive Maintenance program into a Plant Profitability program. It provides a cost-effective

solution to maintaining uptime on all of your rotating equipment. ProSmart continuously monitors, analyzes and annunciates an alarm when critical criteria is not met. By identifying, diagnosing, and sounding an alert to potential equipment problems before they have a chance to manifest into unexpected downtime or catastrophic failure, ProSmart helps to assure plant profitability.

**ProSmart delivers benefits that go right to the bottom line.**

- Extends equipment life
- Optimizes costly “walk arounds” by skilled personnel
- Can help reduce overall equipment failures and the cost of downtime
- Sends alerts prior to potential catastrophic process failures
- Automatically alerts personnel to machine problems.
- Consolidates data for equipment optimization (\*Patent pending)

ProSmart is a wireless machinery monitoring system that collects and analyzes operating data automatically every 5 seconds. Integrated analysis capabilities provide enhanced data and reporting functions.

**PUMPSMART**

PumpSmart® is the latest advancement in pump control and protection to reduce energy consumption, increase uptime and decrease maintenance cost. It allows the pump to be right-sized to the application by dialing in the speed and torque which increases flow economy, reduces heat and vibration and improves overall system reliability.

- **Simplified Pump Control** — PumpSmart was designed specifically to optimize pumping applications and can be used to control a single pump or coordinate between multiple pumps with out the need for an external controller.
- **Pump Protection** — PumpSmart guarantees to protect the pump from upset conditions with patented sensorless pump protection algorithms.
- **SMARTFLOW** — PumpSmart features a sensorless flow function for centrifugal pumps that can calculate the flow of the pump with in ±5% of the pump rated flow.
- **Drive for the DCS** — While most VFDs can only provide basic information PumpSmart offers unparalleled insight to the pump operation which allows for smoother process control and efficiency.
- **Pump Experts** — PumpSmart is a variable speed drive with pump specific algorithms imbedded into the drive. With over 150 years of pump knowledge let the pump experts take responsibility of your pump system.
